DRILLING HAS COMMENCED AT THE VIKING GOLD PROPERTY IN NEWFOUNDLAND

Northern Abitibi Mining Corp. ("Northern Abitibi") is pleased to announce that drilling has begun on the Viking gold Property in Newfoundland. A minimum of 10 drill holes are planned to test several high grade gold zones that have recently been discovered by trenching.

Hole number 1 is complete, and the drill is currently on hole number 2. Hole 1 tested a quartz-sulfide vein that returned 308 grams/tonne gold over 0.75 meters at surface in Trench 9. Hole 1 has successfully intersected two quartz sulfide veins, one with a core length of 1.8 meters and the second with a core length of 0.5 meters. The quartz veins are composed of white quartz with minor amounts of pyrite, galena, chalcopyrite, sphalerite and traces of visible gold. Hole 1 is currently being logged and sampled.

The company is very pleased with the first drill hole of the ongoing program. Hole 1 has confirmed that the veins at surface extend to depth, and is helping to constrain the width and orientation of the mineralized veins which remain open in all directions.

Northern Abitibi

Northern Abitibi's technical team of experienced, professional geologists are assembling a portfolio of gold, nickel and other base metal projects from opportunities within Canada, Mexico and the United States. Northern Abitibi can earn a majority interest in the Viking project from Altius Resources Inc. by making staged share and cash payments and funding exploration over a period of 4 years. A description of the Viking project is available on our website (www.naminco.ca).

The drill program is being supervised by Dr. Shane Ebert, P.Geo., and Dr. Stephen Rowins, P.Geo. Dr. Shane Ebert, P.Geo., is the Qualified Person responsible for the preparation of this news release.
